

Remove stubborn mineral buildup from glass on cars, boats, and buildings.

Our product, the Perfect Remover SHOGUN, is a proprietary polishing compound made from natural minerals, including alumina silicate. Through a specialized refining process, we've removed all impurities, resulting in a highly effective and unique abrasive. When used in combination with our exclusive glass polishing buff, it can remove even the most stubborn mineral stains and scale buildup that regular cleaning products can't address. The result is a brilliant, scratch-free glass surface.

Our work polishing acrylic and glass at an aquarium was featured on a TV show.

Do You Know Why Scale Buildup Sticks to Glass So Stubbornly?

Glass scale buildup is mainly caused by chemical reactions between minerals in water, airborne dust, exhaust, and chemicals. Long-standing buildup often becomes impossible to clean with regular detergents.

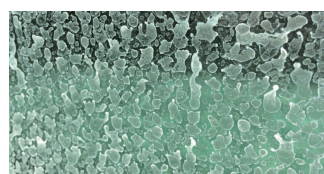

Car Windows
 Stain level ★★☆☆☆

Common water-based mineral stains.

Bus and Ship Windows
 Stain level ★★☆☆☆

Mineral stains from environmental dust, exhaust, or sea water.

Hot Spring Facilities 1
 Stain level ★★★★★☆

ough mineral deposits from hot springs.

Hot Spring Facilities 2
 Stain level ★★★★★★

Strong deposits that have even etched into the glass.

Super Dry Scratch Method^{*} for Quickly Removing Deep Scratches

^{*}Please note that this method uses a polishing compound different from Perfect Remover SHOGUN.

For deep scratches that once required replacement, our Super Dry Scratch method allows you to restore glass without breaking or warping. From auto windshields to architectural glass, it removes scratches up to 6 inches in just 30 minutes.

A deep scratch in the glass that catches your nail.

We polish it thoroughly to prevent any distortion.

After about an hour of polishing, it was very clean.
